

General Purpose Steel Nail

This general-purpose fastener is made of steel and features a pointed end and a flattened head. It is designed for joining pieces of wood or other materials.

Product Overview

Reliable Steel Construction Nails

The General Purpose Steel Nail is a versatile fastener designed for joining wood and other materials in construction and woodworking. Made from high-quality steel, these nails feature a smooth shank and a standard flattened head to provide reliable holding power. Their durable composition ensures resistance to bending or breaking, making them an essential component for professional building projects.

Key Features

Core Attributes

Steel Material	Smooth Shank Type	Flat Head Style
