

Generator Auto Start Control Module

This auto start control module is designed for a wide range of generator applications. It offers advanced monitoring and protection features, including comprehensive engine and generator instrumentation, configurable inputs and outputs, and remote communication capabilities.

Overview

Advanced Generator Control

The Auto Start Control Module is a versatile and powerful solution designed for a wide range of generator applications. It offers comprehensive engine and generator instrumentation, ensuring reliable operation and protection for critical power systems. With advanced monitoring, configurable inputs and outputs, and remote communication capabilities, this unit facilitates efficient diagnostics and seamless integration into building management systems.

Technical Features

Monitoring & Diagnostics

- Real-time data logging
- Event recording
- Comprehensive engine instrumentation
- Comprehensive generator instrumentation
- Configurable inputs and outputs

Control Functions

Auto Start • Alarm Management • Electrical Status Monitoring

Integration Protocols

Remote Monitoring, Building Management Systems, Communication Protocols
