

Generator Component with Flanged End

This generator component features a flanged end with bolt holes and a cylindrical body. It is made of high-grade steel for electric power transmission and distribution systems.

Product Overview

Precision-Engineered Generator Component

This heavy-duty generator component is designed for critical applications in electric power transmission and distribution systems. Featuring a robust flanged end with multiple bolt holes, it is engineered for secure integration and high-stress environments. The component is crafted from high-grade steel using advanced precision machining techniques to ensure dimensional accuracy and long-term durability.

Technical Specifications

Material	High-grade steel
Key Design Features	Flanged End, Multi-bolt Configuration, Cylindrical Body, Precision Machined
Primary Application	Electric power transmission and distribution systems

Manufacturing Quality

Manufacturing Method	Precision Machining • Milling/Boring
Surface Quality	Smooth finish
