

Generator Muffler for Noise Reduction

This muffler is designed for use with power generators. It reduces noise emissions during generator operation and is constructed from durable materials.

Product Overview

Generator Noise Reduction Solution

This specialized muffler is engineered for power generators to significantly reduce operational noise emissions. Constructed from durable galvanized sheet metal, the unit features a unique design that prevents firing-through and ensures longevity even under high-temperature conditions. It provides an efficient exhaust flow while maintaining compliance with noise regulation standards.

Technical Specifications

Application

Power Generators • Industrial Use

Material

Galvanized sheet

Key Features

Noise Reduction, Anti-Firing Design, High-Temperature Resistant, Efficient Exhaust Flow
