

Generator Set Control Module

This control module is designed for diverse generator set applications. It monitors and protects engine speed, oil pressure, coolant temperature, and battery voltage.

Overview

Reliable Generator Control

This versatile control module is designed for manual and automatic generator set applications. It features a simple key-start operation that ensures safe and reliable performance. With built-in engine monitoring, protection functions, and an integrated running hour meter, it provides essential oversight for your power systems.

Operational Features

Frequency Compatibility

50 Hz • 60 Hz

Operation Modes

Manual, Automatic, Key Start

Engine Management

Monitoring & Protection

- Engine preheating function
- Engine monitoring
- Engine protection
- Engine running hour meter

Interface & Display

Display Interface

LED display with alarm icons

Output Control

Fuel and start fixed output
