

Geographic Surveying Leveling Instrument

This is a precision instrument used for geographic surveying. The leveling tool ensures horizontal alignment, while the tripod provides stability and adjustable height for optimal positioning during fieldwork.

Product Overview

Precision Surveying Solution

This geographic surveying leveling instrument is engineered for high-accuracy fieldwork, providing reliable horizontal alignment for diverse surveying applications. The system includes a robust leveling tool mounted on a professional-grade tripod, ensuring stability and precise positioning in challenging outdoor environments. Designed for efficiency and ease of use, it is an essential tool for professionals requiring consistent measurement accuracy.

Technical Specifications

Included Components

- Leveling Instrument
- Tripod Mount

Primary Application

Geographic Surveying

Key Features

High Precision, Horizontal Alignment, Adjustable Height, Field Ready
