

GF160 Gasoline Engine

This high-performance gasoline engine is designed for diverse applications. It features robust construction, ensuring durability and reliable, efficient power output.

Product Overview

High-Performance Gasoline Engine

The GF160 Gasoline Engine is a robust power solution engineered for reliability and efficient performance. Designed for a wide range of industrial and machinery applications, this unit offers smooth operation and durable construction. It serves as a dependable core component for various equipment setups.

Technical Specifications

Construction

Robust Design • Durable

Model Number

GF160

Primary Applications

Industrial Machinery, General Equipment
