

Glass and Ceramic Processing Machine

This machine is designed for processing glass and ceramic materials. It features adjustable settings and a compact design with ventilation.

Overview

Precision Glass and Ceramic Processing

This versatile processing machine is engineered specifically for high-precision work on glass and ceramic materials. Featuring an ergonomic design with intuitive adjustable controls, it offers operators granular command over processing parameters. Its compact footprint and integrated ventilation system ensure reliable performance and cooling during extended operation, making it an essential tool for professional workshops.

Technical Specifications

Design Features

- Adjustable control knobs
- Compact form factor
- Integrated cooling ventilation
- Multi-attachment front panel

Model Number	WSM-200
Suitable Materials	Glass, Ceramic
