

Glass and Ceramic Processing Machine

This high-precision machine is designed for glass and ceramics processing. It features a complex arrangement of gears, belts, and mechanical components for precise material manipulation, suitable for cutting, shaping, or polishing.

Overview

Precision Processing Solution

This high-precision machine is engineered specifically for the intricate processing of glass and ceramic materials. Featuring a robust metal frame and advanced mechanical components, it provides the stability required for demanding industrial applications. The system incorporates adjustable mechanisms to accommodate a wide variety of workpiece sizes and shapes, making it a versatile asset for lens grinding, tile cutting, and specialized forming tasks.

Technical Capabilities

Key Mechanical Features

- High-precision gear arrangement
- Advanced belt-driven manipulation system
- Adjustable workpiece holding mechanisms
- Robust industrial-grade metal frame

Compatible Materials

Glass • Ceramics

Primary Applications

Lens Grinding, Ceramic Tile Cutting, Specialized Glass Forming
