

Glass Edge Grinding Wheel for Linear Grinders

These grinding wheels are designed for use in glass linear edge grinding machines, both domestic and imported. They are used mainly in king kong wheel coarse grinding after fine grinding processes, according to specific customer requirements.

Product Overview

High-Performance Glass Edge Grinding Wheels

These specialized grinding wheels are engineered for use with both domestic and imported glass linear edge grinding machines. Designed for high-efficiency coarse and fine grinding processes, they ensure precise material removal and superior edge finishing. Built for durability and consistent performance, these wheels are essential components for professional glass processing applications.

Technical Specifications

Available Dimensions

Diameter (mm)	Width (mm)	Bore (mm)
100	10	10
125	10	15
125	18	10

Available Grit Sizes

120#, 600#

Compatibility & Application

Primary Processes

- Coarse grinding
- Fine grinding

Compatible Machines

Domestic and imported glass linear edge grinding machines
