

# Golf Cart Steering and Transmission System

This system integrates the steering and transmission functionalities of a golf cart. It allows for directional control and manages power output to the wheels.

## Overview

### Golf Cart Steering and Transmission System

This integrated steering and transmission assembly is engineered for specialized golf course vehicles. It provides precise directional control through a responsive steering mechanism and ensures efficient power delivery to the wheels. Built for terrain navigation, this system is an essential component for maintaining reliable performance in golf transport applications.

## Performance

System Functions	Directional Control, Power Management, Terrain Navigation
------------------	---

## Application

Compatible Vehicles	Golf Carts
Terrain Compatibility	Golf Course Terrain
