

Grain Combine Harvester

This grain combine harvester offers efficient harvesting of grain crops. It features a robust cutting mechanism, an efficient threshing system, and a grain cleaning process to minimize losses and maximize grain quality.

Overview

High-Efficiency Harvesting Solution

The 4LZ series combine harvester is a robust agricultural machine engineered for high-efficiency grain harvesting. It integrates a powerful engine and reliable transmission system to deliver consistent performance across diverse field conditions. Designed with operator comfort in mind, this harvester features an ergonomic cabin and durable construction to ensure long-term reliability and minimal maintenance.

Technical Specifications

Harvesting Mechanism

- Front-mounted header with rotating tines
- Threshing cylinder
- Concave separation system
- Cleaning sieve for debris removal

Performance Highlights

4 LZ

Series Model

Features

Design & Comfort

Ergonomic Design • High Maneuverability • Operator Comfort • Durable Construction

Key Components

Grain Tank, Unloading Auger, Cleaning Sieve, Threshing Cylinder, Concave
