

Grain Milling and Refining Machine

This high-performance grain processing machine is designed for efficient milling and refinement of various grains. The robust machine features a durable construction, optimized for continuous operation and minimal maintenance.

Product Overview

High-Performance Grain Milling

This grain milling and refining machine is engineered for efficient processing of various agricultural staples, including rice, wheat, corn, and soybeans. Designed for durability and continuous operation, the system features an optimized milling chamber and discharge mechanism to ensure consistent output quality. It is a robust solution suitable for agricultural and food processing environments requiring reliable performance.

Performance Metrics

Output Capacity

400 kg/h

Minimum Output

1500 kg/h

Maximum Output

Power Requirements

- 7.5-15kW electric motor
- 8-18kW diesel engine

Physical Specifications

Net Weight Range

300 kg

Applications

Compatible Grains

Rice, Wheat, Corn, Soybean
