

Grain Thresher for Rice and Wheat

This grain thresher is designed for separating rice and wheat from their stalks and husks. It utilizes a cylindrical perforated drum for threshing and includes a feeding hopper and grain outlet.

Product Overview

High-Efficiency Grain Thresher

This specialized grain thresher is engineered to streamline the post-harvest processing of rice and wheat. By effectively separating grains from stalks and husks, the machine significantly boosts agricultural throughput and labor efficiency. The design incorporates a sturdy, mobile frame and a high-capacity drum system to ensure consistent performance in various field conditions.

Technical Specifications

Design Components

- Cylindrical perforated threshing drum
- High-capacity feeding hopper
- Integrated grain collection outlet
- Sturdy mobile frame with transport wheels

Compatible Crops	Rice, Wheat
-------------------------	-------------

Performance

Operational Efficiency

Automated Separation • Improved Harvesting Speed
