

Granule Feedstuff Processing Machine

This machine processes various agricultural materials into uniform granules. It features adjustable settings for controlling granule size and is suitable for producing feedstuff for livestock and poultry.

Overview

High-Efficiency Granule Feedstuff Processing

This granule feedstuff processing machine is engineered for the efficient conversion of agricultural materials into uniform feed pellets. Built with a robust design, it ensures consistent performance for livestock and poultry feed production. The system features adjustable settings to accommodate different granule sizes, making it a versatile solution for agricultural processing needs.

Performance Metrics

Production Capacity (3 mm template)

120 kg/h
Min Output

160 kg/h
Max Output

Production Capacity (5 mm template)

160 kg/h
Min Output

260 kg/h
Max Output

Technical Specifications

Motor Power	4 kw
Machine Weight	75 kg
Dimensions (L x W x H)	900 x 350 x 700 mm

Features

Suitable For	Livestock Feed, Poultry Feed, Agricultural Processing
