

Greenhouse Film Blowing Machine

This machine produces plastic films for greenhouse applications. It is engineered for continuous operation and high output of quality greenhouse films.

Product Overview

High-Performance Greenhouse Film Production

This high-rise plastic film blowing machine is engineered specifically for the continuous, large-scale production of agricultural greenhouse films. Featuring a multi-level structure, it facilitates optimal film cooling and stretching to ensure superior durability and optical clarity. Equipped with advanced control systems, the machine allows for precise management of film thickness and width, supporting efficient and consistent manufacturing output.

Technical Capabilities

Key Features

- Multi-level structure for enhanced cooling and stretching
- Advanced control systems for precise thickness management
- Robust frame construction for high-output operation
- Sophisticated cooling system with integrated piping
- Adjustable parameters for varied film specifications
