

Grinding Ball Separator

This grinding ball separator is designed for efficient material separation. It features adjustable settings for different ball sizes and material types, ensuring optimal separation efficiency.

Overview

Industrial Grinding Ball Separator

This heavy-duty grinding ball separator is engineered for efficient material processing in demanding industrial environments. Designed to handle both grinding balls and bars, it effectively removes surface burrs to improve product quality. The system features a robust steel frame and a high-torque electric motor for high throughput, significantly reducing manual labor requirements.

Technical Specifications

Key Features

- Robust steel frame construction
- High-torque electric motor
- Precision separation mechanism
- Adjustable settings for various ball sizes

Primary Application

Grinding Balls, Grinding Bars, Surface Deburring
