

Ground Mount Satellite Dish Antenna

This ground mount satellite dish antenna is designed for reliable satellite communication. Its robust and weather-resistant design ensures stable signal reception and transmission.

Overview

High-Performance Satellite Communication

The KU60 ground mount dish antenna is a robust and reliable solution engineered for optimal satellite signal reception and transmission. Featuring a durable construction and a stable ground mounting system, this antenna is designed to withstand various environmental conditions for long-term performance. Its parabolic reflector ensures high gain and focused beamwidth, making it an efficient and cost-effective choice for both residential and commercial satellite applications.

Technical Specifications

Durability Features

Weather-resistant • Long-term durability • Robust construction

Model Designation	KU60X65
Base Configuration	Triangle Base, Circle Base
Mounting Type	Ground Mount

Installation & Adjustment

Alignment Capabilities

- Adjustable elevation angle
- Adjustable azimuth angle
- Precise satellite alignment
