

Ground Mount Solar Panel Racking System

The ground mounting system is well-suited for medium or large-scale commercial PV power plants. It can offer a wide range of foundation solutions, such as concrete with pre-buried bolt, direct buried and ground screw, and so forth.

Overview

Commercial Ground Mounting Solution

This ground mounting system is engineered for medium to large-scale commercial photovoltaic power plants. Constructed from corrosion-resistant materials, it is built to withstand harsh weather conditions for long-term outdoor reliability. The system is highly customizable, designed to eliminate the need for on-site welding or cutting, which significantly reduces installation time and labor costs.

Technical Specifications

Material Characteristics

Corrosion-resistant • Outdoor-grade

Installation Advantages

- Factory pre-customization
- No on-site welding required
- No on-site cutting required
- Reduced labor costs
- Faster installation time

Compatible Foundations

Concrete with pre-buried bolt, Direct buried, Ground screw

Application

Intended Use

Medium or large-scale commercial PV power plants
