

Ground Mounted Solar Energy System

This ground-mounted photovoltaic (PV) system is designed for utility-scale power generation. The system converts sunlight into electricity, contributing to renewable energy production.

Overview

Utility-Scale Solar Solution

This ground-mounted photovoltaic system represents a robust solution for large-scale renewable energy generation. Designed for efficiency and land optimization, the array is configured to maximize solar capture across open fields. The complete infrastructure includes all necessary components for conversion and grid integration, making it a reliable choice for utility-scale power projects.

Technical Specifications

System Capacity

2.4 MW

Total Capacity

System Type

Ground-Mounted • Photovoltaic • Utility-Scale

Project Details

Installation Site	Comune di Galatina, Italy
Completion Date	May 2011
