

Grounding Wire for Power and Telecommunications

This ground wire is suitable for grounding applications within electrical infrastructures. It provides protection against faults and surges, enhancing the safety and stability of power networks.

Product Overview

High-Performance Grounding Solutions

This high-strength ground wire is engineered specifically for electrical power transmission and distribution systems. Designed with a multi-strand construction, it offers enhanced conductivity and durability to ensure the safety and stability of power networks. Built with corrosion-resistant materials, it provides reliable protection against faults and surges even in diverse environmental conditions.

Technical Specifications

Construction	Multi-strand
Primary Applications	Power Transmission, Power Distribution, Telecommunications, Electrical Infrastructure

Key Features

Durability Features

- Corrosion-resistant materials
- High-strength design
- Enhanced conductivity
- Fault and surge protection
