

Ground/Water Source Heat Pump Unit

This ground/water source heat pump efficiently transfers heat to and from the ground or a water source. It is designed with a durable, enclosed metal casing and features accessible ports and valves for fluid connections.

Overview

High-Efficiency Thermal Solution

This Ground/Water Source Heat Pump unit is engineered for robust performance in both heating and cooling applications. Designed with modular construction and durable metal casing, it offers reliable operation for commercial or residential thermal management. The unit features integrated fluid connections and optimized airflow management to ensure efficient heat exchange across various environmental conditions.

Technical Specifications

Build Quality

Modular Design • Reinforced Metal Casing

Key Components

- Integrated fluid ports and valves
- Air duct connection interface
- Durable exterior fasteners

Heat Source Compatibility

Ground Source, Water Source
