Product Overview

Reliable Electrical Connectivity

These H-type and U-type electrical terminal blocks are designed to provide secure, organized, and reliable connection points for various electrical applications. Constructed from high-quality insulating materials and brass, they offer excellent durability and a long service life. Their robust design ensures they are resistant to wear, making them an ideal choice for both household appliances and professional electrical equipment.

Technical Specifications

Available Configurations

H-Type • U-Type

Key Advantages

- High hardness
- Wear resistant
- Long service life

Construction Materials

PA, PE, PP, Brass

Applications

Primary Applications

- Lamps and lighting
- Household appliances
- General electrical output equipment
- Wire connection management
