

Hair Dryer Heating Element

This heating element is designed for use in hair dryers. It features a coiled resistance wire stretched between insulator boards for efficient heat transfer.

Product Overview

High-Performance Heating Element

This heating element is a critical component designed specifically for hair dryers, ensuring reliable and consistent performance. Engineered with high-quality mica sheets, durable resistance wire, and a precise thermostat, it provides stable heat distribution for optimal airflow. Its robust construction is built to withstand high temperatures and repeated thermal cycling, making it a dependable choice for appliance manufacturing.

Technical Specifications

Core Components

- Mica sheet insulation
- Resistance wire
- Thermostat
- Metal support structure

Electrical Connections

White, Black, Red

Quality & Performance

Key Advantages

Stable Quality • Competitive Pricing • Timely Delivery • High-Temperature Resistant
