

Half Round Hand File

Half round files are designed for shaping and smoothing curved surfaces and contours. The tool features a double-cut pattern on the curved side and a single-cut pattern on the flat side.

Product Overview

Professional Half Round File

This half-round hand file is a versatile tool designed for shaping and smoothing curved surfaces, contours, and internal openings. Featuring a dual-pattern design, it offers a double-cut pattern on the curved side for efficient material removal and a single-cut pattern on the flat side for finer finishing. Constructed from high-carbon steel, this tool ensures durability and consistent performance across metal, wood, and plastic applications.

Technical Specifications

Material	High-carbon steel
Cut Patterns	Double-cut (curved side), Single-cut (flat side)
Model Number	1366N 8

Design Features

Design Characteristics

- Tapered shape for precision work
- Tang for secure handle attachment
- Half-round profile for curved surfaces

Suitable Materials

Metal • Wood • Plastic
