

Hammerhead Tower Crane

This topkit tower crane features a classic structural design, connecting the boom and balance jib through a pull rod. It is suitable for construction environments with low installation density, offering a maximum working radius of 30-70 meters and a maximum lifting capacity of 4-50 tons.

Product Overview

Robust Lifting Solutions for Large-Scale Construction

The Hammerhead Tower Crane is designed for high-precision material handling and heavy-duty lifting in complex construction environments. Featuring a modular design that facilitates efficient assembly, this crane is engineered to meet the demands of high-rise building projects and large-scale industrial infrastructure. It incorporates advanced control systems and safety mechanisms to ensure reliable and secure operation throughout every lifting cycle.

Certification & Compliance

Quality & Safety Certifications

CE, ISO 9001, TUV SUD
