

Handheld Digital Anemometer

This handheld anemometer accurately measures wind speed. Its features include a digital display, an impeller for detecting wind, and an ergonomic design.

Product Overview

Professional Wind Measurement

This handheld digital anemometer is a precise instrument designed for accurate wind speed detection in various professional environments. Featuring an ergonomic design for easy handling and a clear digital display, it ensures reliable readings for geographic surveying, environmental monitoring, and industrial applications. Its robust impeller system captures airflow data efficiently, making it an essential tool for field technicians.

Technical Specifications

Model Identifier	AN501
Measurement Type	Wind Speed

Key Features

Suitable Applications

- Geographic Surveying
- Environmental Monitoring
- Industrial Airflow Testing

Design Highlights	Handheld, Digital Display, Ergonomic
