Product Overview

Automated Hard Candy Production

This high-performance hard candy depositing line is designed for efficient, large-scale manufacturing of filled and unfilled confections. Featuring advanced PLC control and a user-friendly LED touch interface, the system ensures precision in ingredient metering, temperature regulation, and process monitoring. The line supports a wide variety of candy styles, including striped, double-layered, and center-filled varieties, with custom mold capabilities to match specific product shapes.

Performance & Capacity

Production Capacity

150 kg/h

Minimum Capacity

450 kg/h

Maximum Capacity

Technical Features

Control & Operation

- PLC / Computer process control
- LED touch panel interface
- Frequency inverter flow control
- Automatic injection dosing pumps

Production Capabilities

Supported Candy Types

Central Filling, Two-color striped, Three-color striped, Double-layer, Clear hard candy, Chocolate-center

Construction & Design

System Components

- Cooking kettle
- Forming machine
- Filling unit
- Cooling tunnel
- Wrapping machine

Construction Material

Stainless Steel
