

Hardened Steel Demolition Chisel with Handle

This hand tool features a broad, flat, hardened steel blade designed for demolition, shaping, or splitting materials. It has a long, sturdy handle with a striking head at the opposite end of the blade, allowing it to be struck with a hammer or mallet.

Product Overview

Professional Demolition Chisel

This robust hand tool features a broad, flat, hardened steel blade specifically engineered for heavy-duty demolition, shaping, and splitting tasks involving stone or concrete. Designed for durability and performance, it includes a long, sturdy handle and a dedicated striking head, allowing for effective use with a hammer or mallet. The beveled blade edge ensures efficient material removal, making it a reliable choice for demanding construction and masonry projects.
