

# Harvester Replacement Part

This is a replacement part designed for harvesters. The component is made of cast metal and features rounded teeth.

## Product Overview

### High-Durability Harvester Component

This cast metal component is designed for use in heavy-duty harvesting machinery and agricultural equipment. Featuring a robust gear-like design with rounded teeth and a central bore, it serves as a critical replacement part for drivetrain or harvesting assemblies. The durable construction ensures reliable performance even under demanding field conditions.

## Physical Characteristics

Material	Cast Metal
Component Type	Gear/Sprocket
Design Features	Cast Metal, Central Bore, Rounded Teeth

## Application

### Compatibility

Agricultural Machinery • Harvester Spare Parts

Primary Application	Harvesting machinery and agricultural equipment replacement
