

# Harvester Wheel Rims

The harvester rims are designed for robust performance in agricultural machinery. Their splined bore ensures secure attachment to a mating shaft, while the cutouts reduce weight and aid in debris shedding.

## Product Overview

### High-Performance Harvester Rims

These 404 pitch mechanical harvester driver sprockets are engineered specifically to match high-demand harvester chains. By providing an efficient chain drive mechanism, these rims play a crucial role in maximizing the operational uptime of agricultural machinery. Their robust construction ensures increased effective chain life, making them a reliable choice for professional harvesting applications.

## Technical Specifications

### Design Features

- Central splined bore for secure shaft attachment
- Teardrop-shaped cutouts for weight reduction
- Optimized for debris shedding during operation

Pitch Size	404
Material Construction	Durable Metal, Industrial Grade
