

HE551V Turbocharger Compressor Housing

The HE551V compressor housing optimizes airflow to the compressor wheel, enhancing boost response and overall engine efficiency. Its robust design ensures longevity and reliability under demanding operating conditions.

Product Overview

Precision-Engineered Compressor Housing

The HE551V compressor housing is a precision-engineered component designed for high-performance turbocharger systems. Constructed from durable cast aluminum, this housing optimizes airflow to the compressor wheel, enhancing boost response and overall engine efficiency. Its robust design ensures longevity and reliability under demanding operating conditions, making it an ideal choice for professional upgrades and replacements.

Technical Specifications

Material

Cast Aluminum • High-Grade Alloy

Key Features

- Optimized volute design for efficient airflow
- Smooth internal surfaces to minimize turbulence
- Improved boost response
- Enhanced heat dissipation

Model	HE551V
STT Number	H5520030
OE Part Number	3767209
OE Name	Holset Housing
