

Heat Pump Water Heater System

This water heater system provides hot water on demand for residential or commercial use. The condenser unit facilitates efficient heat transfer, ensuring optimal performance and energy savings.

System Overview

Efficient Hot Water Solution

This heat pump water heater system offers an advanced, energy-efficient solution for residential and commercial hot water needs. Comprised of a durable indoor storage unit and a high-performance outdoor condenser, the system is designed to provide reliable hot water on demand. Its specialized design ensures optimized heat transfer, making it an ideal choice for homes, apartments, and small-scale business applications seeking to reduce energy consumption.

Suitable Applications

Residential, Commercial, Apartments, Small Businesses

Technical Specifications

System Components

- Indoor cylindrical water heater unit
- Outdoor heat transfer condenser unit

Key Performance Metrics

1 Cylindrical

Design Type

1 High

Energy Efficiency
