

Heat Resistant Aerosol Coating

This aerosol paint is designed to resist high temperatures. It provides a durable coating that prevents corrosion and maintains structural integrity.

Product Overview

High-Performance Thermal Protection

This heat-resistant aerosol coating is specifically engineered for applications requiring robust thermal protection. It provides a durable, reliable barrier that withstands elevated temperatures, effectively preventing corrosion and maintaining the structural integrity of treated surfaces. Designed for ease of use, the aerosol format ensures uniform coverage and excellent adhesion on demanding high-heat components.

Technical Specifications

Net Volume	400 ml
Model Number	M1130-1

Application & Features

Key Performance Features

- Excellent adhesion
- High flexibility
- Resistant to cracking
- Resistant to peeling
- Resistant to blistering

Ideal Applications	Exhaust Systems, Engine Components, High-Heat Surfaces
Application Method	Aerosol spray
