

# Heater and Heat Exchange Mounting Bracket

This metal bracket is designed for mounting and securing heater and heat exchange components. It features precise hole placement for easy installation and a corrosion-resistant finish.

## Product Overview

### Engineered for Reliability

This mounting bracket is specifically engineered for the secure installation of heater and heat exchange components in industrial heating and cooling systems. Constructed from durable metal, it features a corrosion-resistant finish that ensures longevity even in demanding environments. Designed with precise hole and slot placement, the bracket facilitates straightforward installation and reliable component support for various technical applications.

## Technical Specifications

### Finish

Corrosion-resistant

### Installation Features

- Multiple mounting holes
- Integrated slots
- Precise hole placement
- Easy installation design

### Material Construction

Durable Metal

### Primary Applications

Heating Systems, Cooling Systems, Heat Exchange Units
