

Heavy Construction Machinery

This heavy-duty construction machinery features a boom arm and hydraulic systems. It is designed for demanding construction and infrastructure projects, offering high performance and reliability in material handling and excavation tasks.

Overview

High-Performance Construction Machinery

This heavy-duty construction machinery is engineered for demanding infrastructure and excavation projects. Featuring a robust chassis and advanced hydraulic systems, it ensures superior material handling capabilities and reliability on the job site. Designed for durability and high performance, this equipment is an essential asset for large-scale construction operations.

Technical Specifications

Primary Applications

- Material Handling
- Excavation Tasks
- Infrastructure Projects

Model Number	SY5320THB 48
Equipment ID	ZJ-01-01
Key Features	Heavy-duty, Hydraulic System, Robust Chassis, Boom Arm
