

Heavy Duty Air Transporter with Six Modules

Air casters are suitable for environments requiring strict cleanliness. This system utilizes compressed air to create a near-frictionless interface, enabling effortless movement of heavy loads.

Product Overview

Heavy Duty Air Transporter System

This heavy-duty air transporter system features six independent modules designed for moving substantial machinery and equipment with precision. By utilizing compressed air to create a near-frictionless interface, the system ensures smooth, effortless movement even for loads with varying weight distributions. Its modular design is shock-proof and pollution-free, making it suitable for environments with strict cleanliness requirements.
