

Heavy-Duty Axle Assembly for Construction Machinery

This heavy-duty axle assembly is designed for loaders, excavators, and bulldozers. It is engineered to withstand demanding conditions, providing reliable performance and durability.

Product Overview

Engineered for Extreme Conditions

This heavy-duty axle assembly is specifically designed for high-demand construction machinery, including loaders, excavators, and bulldozers. Built for reliability and longevity, it features a reinforced differential housing and high-strength axle shafts to withstand rigorous operational environments. Precision-machined gears ensure optimal power transmission while minimizing wear, making it an ideal solution for applications requiring high load capacity and consistent performance.

Technical Specifications

Design Features

- Reinforced differential housing
- High-strength axle shafts
- Precision-machined gears

Compatible Machinery

Loaders, Excavators, Bulldozers

Performance

Core Performance Metrics

1 High

Load Capacity
