

Heavy-Duty Battery Clamp with Insulated Handles

This heavy-duty battery clamp is designed for secure and reliable connections in automotive and electrical applications. It features robust construction with insulated handles for user safety, ensuring optimal conductivity and minimizing power loss.

Product Overview

Professional Heavy-Duty Battery Clamp

This heavy-duty battery clamp is engineered for secure and reliable electrical connections in demanding automotive and industrial environments. Featuring copper-plated steel jaws and insulated handles, it ensures optimal conductivity while prioritizing user safety during operation. Its robust construction makes it an ideal choice for battery charging, jump-starting, and various electrical testing applications.

Performance Highlights

Key Performance Metrics

400 A

Rated Current

Technical Specifications

Corrosion Resistance

Corrosion-Resistant Materials

Material	Copper plated steel clamps and jaws
Handle Insulation	Yes

Application & Usage

Primary Applications

- Battery charging
- Jump-starting
- Electrical testing
- Secure electrical connections

Recommended Sectors

Tactical, Outdoor, Recreation, Automotive, Industrial

Design Features

Grip Strength

Strong grip on battery terminals even in demanding conditions

Efficiency

Minimizes power loss through high conductivity
