

Heavy-Duty Casting and Forging Conveyor System

This heavy-duty conveyor system is designed for casting and forging applications. It features a robust steel frame construction with integrated rollers and a durable conveyor belt.

Product Overview

Industrial Conveyor Solution

This heavy-duty conveyor system is engineered specifically for the rigorous demands of casting and forging environments. Built with a robust steel frame and integrated rollers, it ensures reliable material transport under high-load conditions. The system features a geared motor drive designed for efficiency and durability, making it an ideal choice for handling high-temperature materials in demanding industrial settings.

Technical Specifications

Key Features

- Heavy-duty steel frame construction
- Integrated roller system
- Durable industrial conveyor belt
- Reliable geared motor drive

Construction Material	Robust Steel Frame
Drive Mechanism	Geared Motor Drive
Suitable Environments	Casting, Forging, High-Temperature Areas, Heavy-Load Industrial
