

# Heavy-Duty Marine Mooring and Cable Handling Equipment

This equipment includes heavy-duty marine mooring winches and cable fairleads. They are constructed from robust steel for durability in harsh marine environments, ensuring safe and efficient vessel operations.

## ADDITIONAL IMAGES

## Product Overview

### Heavy-Duty Marine Solutions

This range of heavy-duty marine mooring and cable handling equipment is engineered for reliability in the most demanding maritime environments. Constructed from robust, corrosion-resistant steel, these systems ensure safe and efficient vessel mooring, towing, and anchoring operations. With customizable configurations and precise control mechanisms, this equipment is designed to minimize cable wear, reduce maintenance downtime, and provide long-lasting performance for various vessel sizes.

#### Material Composition

Robust Steel, Corrosion Resistant, Protective Coating

## Mooring Winch

### Key Winch Features

- Large-diameter drum for increased capacity
- Reduced cable wear design
- Precise control system
- Customizable configurations

## Fairlead Roller

### Fairlead Specifications

Feature	Benefit
Material	Robust steel with protective coating
Function	Minimizes friction and chafing
Application	Mooring, towing, and anchoring

## Cable Handling

### Performance Metrics

**1 High**

Corrosion Resistance

**1 High**

Operational Precision
