

Heavy-Duty Motor Grader

This heavy-duty motor grader is designed for precision grading and leveling. It features a robust frame, advanced hydraulic system, and adjustable moldboard for efficient material distribution.

Product Overview

Precision and Power in Grading

The XG32201 is a heavy-duty construction machine engineered for precision grading and leveling of surfaces. It combines a powerful engine with an advanced hydraulic system and a robust frame to ensure high performance and long-term durability. Designed for versatility, it features an adjustable large moldboard for efficient material distribution and an ergonomic cabin to maximize operator productivity.

Key Features

Design Highlights

- Articulated steering for superior maneuverability
- Multi-speed transmission system
- Adjustable moldboard for various cutting angles and depths
- Ergonomic operator cabin with high visibility

Primary Applications

Road Construction, Site Preparation, Earthmoving

Technical Specifications

Durability & Traction

Robust Frame • Durable Tires • Heavy-Duty Construction

Model Identifier

XG32201
