

Heavy-Duty Rebar Bending Machine

This heavy-duty rebar bending machine is engineered for efficient and precise bending of rebar. It features a robust construction for durability and long-term reliability in demanding construction environments.

Product Overview

Heavy-Duty Rebar Bending Solution

This professional-grade rebar bending machine is engineered for high-performance construction environments. It features a maintenance-free spindle and an upgraded heavy-duty gear box assembly, ensuring long-term reliability. With a reinforced design that prevents deformation, the machine delivers precise bending results for various steel bar diameters.

Certifications

TUV, BV, SGS

Technical Specifications

Key Performance Metrics

3 kW

Motor Power

Bending Capacity by Model

Model	Plain Bar (mm)
JN/GW40	16-40
JN/GW45	13-45
JN/GW50	16-50
JN/GW55	16-55

Design and Build

Primary Advantages

- Maintenance-free spindle assembly
- Heavy-duty reinforced gear box
- High-quality alloy steel column and spool
- Moisture-proof enclosed electric cabinet
- Double-sided operation for increased efficiency
- Rotary oil-way for convenient maintenance
