

# Heavy-Duty Soil Compactor

This heavy-duty construction machine is designed for soil compaction and road construction. It features a robust steel drum with specialized tamping feet to deliver high impact force for effective soil stabilization.

## Product Overview

### Professional Soil Compaction Solution

The RM206K road roller is a versatile heavy-duty machine designed for demanding construction environments. Featuring specialized combined padfoot vibrating drums, it offers exceptional flexibility for various soil types and compaction needs. With a focus on operator comfort and environmental performance, this roller integrates a high-efficiency engine and an advanced, safety-oriented cab design.

## Key Features

### Key Operational Benefits

- Dismantlable padfoot drum for cost-effective configuration
- Wide optimal working range for diverse conditions
- Rear lift streamlined GRP engine cover
- Pneumatic boosted brake system

### Common Applications

Soil road layers, Gravel paving, Refuse landfill, Dam construction

## Operator Environment

### Cab Specifications

- High intensity construction
- Wide visibility
- Low vibration levels
- Low noise operation

## Performance

### Performance Highlights

**1 Pneumatic**

Brake System
