

Heavy-Duty Vehicle Engine

This high-performance engine is designed for heavy-duty vehicle applications. The robust engine features a durable construction and advanced engineering for reliable operation and long service life.

Overview

High-Performance Heavy-Duty Engine

This series of high-performance engines is engineered for demanding heavy-duty applications, offering robust power and reliability. With options for both diesel and natural gas configurations, these engines feature advanced 6-cylinder inline architecture and 4-valve designs. Built for longevity, they boast an impressive B10 lifespan of 1.5 million kilometers, ensuring dependable performance for long-haul logistics, construction, and industrial use.

Technical Specifications

Cylinder Configuration	6 cylinders inline
Valve System	4 valves, overhead camshaft
B10 Lifespan	1500000 km
Emission Compliance	Euro 4, Euro 5, Euro 6 Ready

Performance Metrics

Diesel Engine Capabilities

Model	Displacement
CM6D10	7.8L
CM6D18	9.8L
CM6D28	11.8L
CM6D30	12.8L

Power Output Range

199 kW

Min Power

412 kW

Max Power

Applications

Suitable Applications

- Highway logistics transportation
- Engineering transportation
- Special vehicles
- Long-distance buses
- Construction machinery
- Generator sets
