

Heavy Equipment Roller Dolly

Load moving skates are a safe tool for relocating machines. The individual rollers can also be used to move large items such as furniture.

Overview

Heavy-Duty Industrial Load Moving Skates

These heavy-duty roller dollies are engineered for the safe and efficient transport of large machinery and industrial equipment. Designed with a robust steel frame and durable polyurethane rollers, they provide stable movement across flat surfaces while protecting floor integrity. Available in multiple configurations, these skates offer a reliable solution for maneuvering heavy loads in factories, warehouses, and construction environments.

Available Configurations

- Steerable machinery skates
- Mounted roller skids
- Rotating moving dollies
- Veered moving skates

Technical Specifications

Frame Construction	Robust Steel
Roller Material	Durable Polyurethane
Key Design Features	Swivel top plates, Load fixing capability, Compact design

Performance

Suitable Environments Factories • Warehouses • Construction Sites	
Load Capacity	Several to dozens of tons
