

Heavy Equipment Transport Trolley with Rotating Top

This heavy-duty machinery trolley is designed for transporting and moving heavy equipment. It features a rotating top for easy positioning and multiple rollers for smooth movement.

Product Overview

Industrial Heavy Equipment Transport Trolley

This heavy-duty machinery transport trolley is engineered with a reinforced, thickened steel plate structure to withstand significant industrial loads. Featuring a 360-degree rotating top, it allows for precise positioning and maneuverability of heavy machinery in warehouses, factories, and construction environments. The design focuses on labor efficiency, significantly simplifying the complex task of moving and unloading heavy equipment.

Technical Specifications

Rotation	360 degrees
Construction	Thickened steel plate

Key Benefits

Operational Advantages

- Labor-saving design
- Improved work efficiency
- Simplified machine transport
- Precise positioning via rotating top

Applications

Typical Use Cases	Factories, Warehouses, Construction Sites, Machine Installation
