

Heavy Lifting Tower Crane

This tower crane is designed for heavy lifting operations at construction sites. Its modular design allows for straightforward assembly and disassembly.

Overview

Robust Tower Crane for Heavy Construction

The QTZ7030B is a high-performance tower crane engineered for demanding heavy lifting operations across diverse construction environments. Its modular design allows for rapid assembly and efficient site relocation, while the advanced control system provides precise handling of materials. Designed for stability and safety, this unit is perfectly suited for managing heavy steel and concrete loads.

Performance

Operational Capabilities

70 m

Jib Length

30 kN

Load Capacity

Key Features

Design Highlights

- Modular design for simplified assembly and disassembly
- Advanced control system for precise movement
- High-visibility red and white safety color scheme
- Sturdy construction for high operational stability

Compatibility

Suitable Materials

Concrete, Steel, Heavy Building Materials
