

Heavy Machinery Axle for Loaders and Excavators

This heavy-duty machinery axle is designed for loaders, excavators, and bulldozers. It features a robust central beam with integrated hubs for hydraulic and suspension systems.

Product Overview

Engineered for Demanding Environments

This heavy-duty construction machinery axle is precision-engineered for use in loaders, excavators, and bulldozers. Designed to withstand rigorous operational conditions, it features a robust central beam that provides superior strength and stability under heavy loads. The unit comes fully equipped with integrated hubs and connection points, ensuring seamless compatibility with hydraulic systems and suspension components for reliable performance in the field.

Technical Specifications

Key Design Features

- Robust central beam construction
- Integrated wheel hubs
- Hydraulic system connection points
- Suspension component mounting points

Compatible Machinery

Loaders, Excavators, Bulldozers

Performance

Performance Focus

Heavy-duty • High-load Capacity • Construction-grade
