

Heavy Machinery Moving Skates with Rotating Top Plate

These moving skates are designed for transporting heavy machinery and equipment. They feature a rotating top plate that allows for easy steering and precise positioning.

Product Overview

Heavy-Duty Machinery Moving Solutions

These heavy machinery moving skates are engineered for the safe and efficient transport of industrial equipment. Featuring a rotating top plate for precise steering and low-profile design, they minimize friction to reduce the physical effort required for pulling or pushing heavy loads. Built for durability, these rollers are designed to withstand years of rigorous use in professional industrial environments.

Technical Specifications

Operational Benefits

- Low rolling resistance
- High load capacity
- Low profile design
- Rotating top plate for easy positioning

Industry Experience

20 +

Years of Application

Expected Service Life

10+ years

Available Wheel Materials

Polyurethane, Nylon, Alloy Steel
